

Structured cabling options

FEATURE	BENEFIT
DIGITAL CABLE AND SATELLITE DISTRIBUTION	Bring hundreds of channels into your home from a satellite or cable provider* – and deliver HDTV throughout your home.
VIDEO MONITORING	Keep an eye on the most important assets in your home with Leviton home video monitoring which lets you watch up to four high-quality security video cameras on dedicated channels from any TV in your home.
MULTI-ROOM AUDIO	Equip your home with a high-performance, built-in multi-room audio system that will deliver music both inside and outside when used with your existing home entertainment components.
MULTI-ROOM VIDEO	Provide your home with multi-room video and your own dedicated entertainment TV channel for viewing TV, VHS tapes or DVDs. Just select the channel on any cable-ready TV in your home.
INTERCOM	Feel secure knowing who is at your door with an intercom system that lets you talk to visitors by phone and see them on your TV (when integrated with a camera monitoring system). You also can communicate with family members in different rooms.
NETWORKING	Link all the computers in your home with one high-speed network, sharing files, printers, scanners and other hardware for everything from home office to video games.
INTERNET SHARING	You can simultaneously access the World Wide Web with multiple computers using one high-speed broadband account.** You'll enjoy super fast downloads, web surfing and protection from hackers with an ultra-safe, built-in hardware-based firewall.
DIGITAL MULTIMEDIA DISTRIBUTION AND ENTERTAINMENT	Enjoy a high performance, multimedia server that ties together your home's computers and entertainment electronics, such as TVs and audio systems. It is also an Internet Gateway with a professional grade hardware firewall that lets you network your computers and share your broadband connection.**

STATISTICS

According to the Consumer Electronics Association, 61% of new homes are now being built with structured cabling. And, according to Parks and Associates, the structured cabling market is a dynamic market that continues to grow and evolve. By the end of 2005, there will be over 5.2 million homes with structured cabling installed (including the 1.4 million new installations this year).

Pre-wiring a home for technology with Leviton structured cabling is no longer a luxury; it is a necessity. It is the very catalyst that sets in motion all of the marvelous wonders that state-of-the-art living can provide to you and your family.

¹ Check with your lender for full information.

* Requires HDTV signal from broadcast, cable or satellite service provider.

** Requires high-speed Internet service (cable, DSL, T1 line, etc.) by service provider.

GET CONNECTED

con-nec-tiv-i-ty:

The ability to make and maintain a connection between two or more points.

In the last century, the automobile truly revolutionized where and how Americans lived. It took them out of the house and onto the open road. Today, the World Wide Web and other technologies have brought the world to us without having to leave our homes. A flood of technologies that stream data and information have dramatically uprooted established patterns of everyday behavior – whether we are working or learning, playing or just spending free time. They all have to do with “connectivity.”

Center*

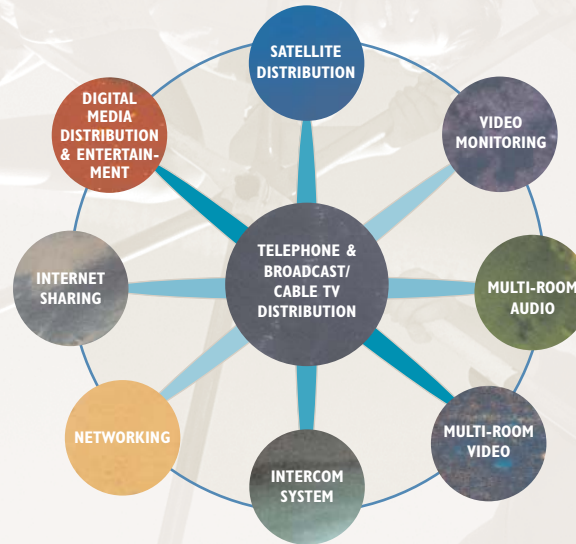

STRUCTURED CABLING

What is it?

The Leviton Structured Cabling System is the foundation on which your home communications and entertainment network will be built. It is designed to organize and distribute connectivity technologies throughout your new home. Structured cabling connects each room on a “direct run” of high capacity Category 5e/6 and coaxial cable to a central enclosure called a Structured Media™ Center (distribution panel). This centrally located system then manages and distributes voice, data, audio and video signals throughout your home.

What does it do?

Starting with the basic building blocks of Telephone and Broadcast/Cable TV distribution, you can choose structured cabling enhancements that can tap into various – and sometimes extremely advanced and complex – connectivity capabilities. These enhancements are modules that simply snap into the Structured Media™ Center and include: Satellite Distribution, Video Monitoring (security cameras/CCTV), Multi-Room Audio, Multi-Room Video, Intercom System, Networking, Internet Sharing, and Digital Multimedia Distribution and Entertainment.

Create a fully functional home office.

What does it do for me?

Because it is modular in design, the structured cabling system can support existing and emerging technologies that can be adapted to your changing needs. The infrastructure to support this system is less costly to install before the walls are up and may even help increase your home’s value. Best of all, it is more affordable at this stage, because its cost may be incorporated into your mortgage¹. Planning for tomorrow’s entertainment, communications and networking technologies should be an essential item on your “new home checklist” today.
